

CUTTING TOOLS

Cutting Tools with High Pressure Cooling

Cutting tools for turning and grooving with high pressure cooling

With our HPC tooling system, coolant is supplied through the clamping finger. The outlet ports are positioned to deliver the coolant directly to the work zone. A coolant pressure of up to 200 bar is possible.

Another advantage of high-pressure cooling is, that unwanted ribbon chips can be quickly broken.

Available as a shank or capto tool for specific applications!

 HPC-Tool
in Action

High pressure cooling tools are available upon request. Our sales representatives are available to answer your questions.
