DENSILOX® – CERTIFIED PRODUCTION QUALITY

CeramTec's DENSILOX® customised dental components produced in our facilities in Germany are certified by the CleanImplant Foundation with the 2021 CleanImplant supplier label. The CleanImplant Foundation, a non-profit organization, was founded in Berlin in 2016 with the aim to promote high quality implants free of contaminants or other alarming remnants on implant surfaces. Our dental production quality was audited and tested by the CleanImplant Foundation in terms of cleanliness and unintended contamination. CeramTec Medical is the first dental ceramic supplier to obtain this quality label.

1

Proven Cleanliness

Samples were tested in an independent testing laboratory according to DIN EN ISO/IEC 17025:2018.* The results of the analysis fully comply with the criteria for the Certified Production Quality label following the consensus guideline of the CleanImplant Foundation Scientific Advisory Board, released in 2017.

2

Impurities are Preventable

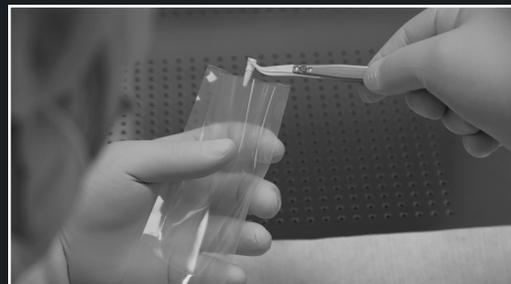

Medical implants can be subject to contamination throughout the entire chain of the manufacturing process, from the selection of raw materials to the clean room packaging. At CeramTec, we pay meticulous attention to cleanliness and hygiene during the entire manufacturing process of our ceramic dental solutions. We aim to deliver contamination-free implants* for the safety of patients.

3

Clean Room Packaging

Our clean room packaging aims to minimize impurities on implants during this production process with the option of sterile packaging as an additional service.

*An organic and inorganic residue analysis was performed on samples and the cleanliness assessed according to the Guidelines of the CleanImplant Foundation.
